Extreme Summer Weather REQUIRES... Extreme Protection & Prevention

When ___ (fill in the blank) ___ crashes... so do you! Are you and your systems protected?

Michigan's summer weather can present a multitude of challenges to systems and processes. If you can't afford to gamble with the possibility that Mother Nature might reek havoc with your critical processes, then let us show you some solutions to help improve your system up-time, reliability and overall performance.

What are we talking about... have you ever experienced one of the following:

1. Brown Outs (Under-Voltage)
2. Lightning Strikes (Temporary Over-Voltage)
3. Spikes/Surges/Glitch's/Voltage Impulse (Transients)
4. Momentary Dropouts (Power Outages)
5. Line Noise
6. Frequency Variations

For simple solutions to these everyday - common problems... please contact your Account Manager or Jeff Berra on our Inside Sales team.
